Education

Indiana University Bloomington | Luddy School of Informatics

Expected May 2029

B.S. in Informatics; Accounting Certificate; Business Minor

GPA: 3.8

Experience

Software Engineering & Corporate Accounting Intern

May 2026 – August 2026

H.T. Hackney | \$4B+ Wholesale Distributor

Indianapolis, IN

- Audited tariff refunds across 1,600+ containers and \$4M+ in total order value, isolated a systemic formula error driving \$30K a year in overpayments, and rewrote the calculation that now runs on every refund cycle companywide
- Engineered and shipped the company's first self-hosted internal e-commerce catalog in Next.js on an on-prem server, integrating live item and pricing data from Microsoft Dynamics behind company single sign-on, and rolled it out to 30 employees
- Consolidated raw invoice and container-level data into an item-level tariff refund model and pivot view in Excel, adopted by the president and senior executives to price refunds and negotiate the largest accounts every cycle
- Reconciled \$500K+ in prepaid overseas inventory at month-end close, matching 300+ vendor invoices in Microsoft Dynamics and booking accruals across 20+ vendors, then documented each workflow so the close could be reperformed by the next intern unaided

Machine Learning Research Assistant

April 2026 – Present

University of Indianapolis | MBA Artificial Intelligence Laboratory

Indianapolis, IN

- Ran 1 of 2 research tracks under Dr. Craig Seidelson, engineering 15 risk, solvency, and efficiency ratios across a 60-company M&A dataset from audited SEC XBRL filings and tuning four model families to 68% accuracy against a 28% baseline
- Overturned the study's headline finding by showing the top-ranked predictor's apparent effect was a firm-size artifact that vanished under partial correlation controlling for revenue, reframing how the variable is taught in the MBA curriculum

Director of Technology

June 2026 – Present

Aperture Partners

Bloomington, IN

- Led the Technology vertical of a 70+ member 501(c)(3) B2B services firm named Kelley Organization of the Year and an IU New Student Organization of the Year finalist, recruiting and directing 15 engineers on weekly cycles with standups and code review
- Rebuilt the organization's Wix site as a static Next.js and TypeScript app on Cloudflare Workers, wrote a crawler-style audit validating metadata, structured data, and internal links across 11 routes, and served 3,000+ page views in 30 days

Projects

Onkos | *Agentic Oncology Trial Matcher; Next.js, FastAPI, LangGraph, vLLM*

April 2026

- Matched cancer patients to 29 active oncology trials on a 4-person team, building an agentic system that scores each against 20+ typed eligibility criteria and returns per-criterion disqualifying logic with cited rationale for clinician review
- Self-hosted MediX-R1, a 30B medical vision-language model, on an NVIDIA GH200 via vLLM, and ran Kimi-K2 through LangGraph for agentic tool calls and PubMed RAG-grounded clinical reasoning over a corpus of active trial protocols

StudForge | *Swarm Robotics World Compiler; Python, React Three Fiber, Qwen, Redis*

June 2026

- Wrote the Python compiler backend on typed Pydantic contracts so a prompt resolves to a schema-constrained SceneSpec; every generated layout clears graph connectivity, spatial collision, and coverage checks before canonical USD export
- Owned the real-time 3D frontend on a 4-person team in TypeScript and React Three Fiber, texturing compiler-generated brick worlds with Midjourney MCP assets and rendering the swarm simulation live as each scene compiled

Honors & Programs

Regeneron Grand Prize, Best Use of AI for Clinical Trials | *HackPrinceton, Princeton, NJ*

April 2026

- Won the \$1,000 Regeneron track Grand Prize out of 200+ teams and 600+ participants at Princeton's flagship hackathon
- Pitched Onkos, an agentic trial matcher for oncologists, to Regeneron's Head of Development Innovation and judging panel

Grand Prize Finalist | *UC Berkeley AI Hackathon, Berkeley, CA*

June 2026

- Placed top 10 finalist out of 460+ teams and 1,600+ participants at the world's largest AI hackathon, run by Cal Hacks
- Pitched StudForge on the main stage to venture capital judges and founders, placing 2nd in the Engineering Track

Anthropic Track Runner-Up | *Stanford TreeHacks, Palo Alto, CA*

February 2026

- Admitted as 1 of 500 non-Stanford students from 15,000+ applicants (3%), one of the world's most competitive hackathons
- Demoed Redhue, a wildfire-spread dashboard, to Anthropic and a CAL FIRE chief as 1 of 20 projects picked from 400+

Deloitte Compass Conference | *Deloitte University, Westlake, TX*

August 2026

- Selected as 1 of 300 from 7,000+ applicants (4%) for a fully funded 3-day national early-career conference
- Built a market expansion strategy for a simulated client, running research through Deloitte's internal GenAI platform (Sidekick), evaluating financing and debt structure, and presenting recommendations to senior managers

Programs: Goldman Sachs Possibilities Series, HackMIT 2026, PEAK6 Young Professionals, Expedition EY Technology Track

Skills

ML/AI: RAG pipelines, multi-agent systems, LLM APIs, model evaluation, feature engineering, Hugging Face

Engineering: Python, Java, TypeScript, JavaScript, React, Next.js, FastAPI, REST APIs, PostgreSQL, Git

Business & Data: SQL, pandas, Excel (financial modeling), Microsoft Dynamics (ERP), M&A research, PowerPoint
